When GIMP was released, it was free, but recently it has become an independent project supported by the Free Software Foundation. It is a robust graphic manipulation program that can do many of the tasks performed by Photoshop, such as producing flattened images, redrawing or retouching raster images, working with vector artwork, creating and converting files, and, of course, editing images. GIMP isn't easy to learn, but it has a large and active user community, and tutorials are available. A good primer for beginners is \_GIMP: The Missing Manual,\_ by Ken Rockwell (O'Reilly). See [www.missingmanuals.org/cds/gimp/](http://www.missingmanuals.org/cds/gimp/) for more information on GIMP. You can view the GIMP software at [www.gimp.org](http://www.gimp.org). each photo individually, you can save yourself a lot of time by working on batches instead. And, in Photoshop Elements 2018, you can even create a new 100% crop and resize your entire folder of images at once. Creating a Photoshop Elements 2018 Group To work on batches of images, you need to create a group. Photoshop Elements groups work just like groups in the full-version of Photoshop, but they're saved in the different file format. You can create a new group in the same way you create a new layer, by choosing File > Groups. In Photoshop Elements 2018, clicking on "Add Files" will automatically create a new group. To choose an existing folder of images, you can drag it onto the "Add Files" icon. Like a normal group, you can create a new group and use it 388ed7b0c7
